

Database Creation and Table Design

The BookFlow database is designed to manage library books and members. The database contains two tables, Books and Members, with constraints to maintain data integrity.

The screenshot displays a database management interface with a SQL editor and a result grid. The SQL editor contains the following code:

```
1 • DROP DATABASE IF EXISTS bookflow_db;
2 • CREATE DATABASE bookflow_db;
3 • USE bookflow_db;
4 • CREATE TABLE books (
5     book_id INT AUTO_INCREMENT PRIMARY KEY,
6     title VARCHAR(255) NOT NULL,
7     isbn VARCHAR(13) NOT NULL UNIQUE,
8     published_year INT,
9     CONSTRAINT chk_published_year CHECK (published_year < 2027)
10 );
11 • CREATE TABLE members (
12     member_id INT AUTO_INCREMENT PRIMARY KEY,
13     full_name VARCHAR(100) NOT NULL,
14     email VARCHAR(150) NOT NULL UNIQUE
15 );
16 • INSERT INTO books (title, isbn, published_year) VALUES
17     ('The Alchemist', '9780061122415', 1988),
18     ('Clean Code', '9780132350884', 2008),
19     ('Atomic Habits', '9780735211292', 2018);
20 • INSERT INTO members (full_name, email) VALUES
21     ('Anil Kumar', 'anil.kumar@example.com'),
22     ('Priya Sharma', 'priya.sharma@example.com'),
23     ('Ravi Verma', 'ravi.verma@example.com');
```

The result grid shows the data for the 'members' table:

	member_id	full_name	email
▶	1	Anil Kumar	anil.kumar@example.com
	2	Priya Sharma	priya.sharma@example.com
	3	Ravi Verma	ravi.verma@example.com
•	NULL	NULL	NULL
